

Community Risk Reduction

Investing in your Community Risk Assessment
Using knowledge to reduce risk

JOHN BONNEY

DAVID BLANKINSHIP

Who's in the Room?

CRA
SoCal

PURPOSE OF THE WEEK

- TO DEVELOP YOUR UNDERSTANDING OF COMMUNITY RISK REDUCTION AND ITS ENTIRE VALUE
- TO DEMONSTRATE HOW INFORMATION AND KNOWLEDGE IS KEY TO MAKING COMMUNITIES SAFER
- TO HELP YOU UNDERSTAND HOW TO CONSTRUCT A COMMUNITY RISK ASSESSMENT
- TO PROVIDE YOU WITH IDEAS AND TOOLS TO SUCCESSFULLY IMPLEMENT A CRA
- TO CONSIDER THE VALUE OF PARTNERSHIPS IN THE CRR PROCESS
- TO DEMONSTRATE HOW CRR IS ABOUT ORGANIZATIONAL CHANGE RATHER THAN JUST PREVENTION
- TO SHARE IDEAS AND EXPERIENCES
- TO EXPLORE, EXPERIMENT AND BUILD A NETWORK

What we expect from you ...

- Commitment & Hard Work
- Honesty and Openness
- Integrity
- Generosity
- Confidentiality
- Respect for Others

What You Can Expect From Us

All of the above plus ...

- Care and support
- Encouragement and challenge

- Exposure to tools and techniques
- References, case studies and source materials
- Slide Deck, guidance notes, learning log
- The process of CRA construction
- Evaluation each day
- Each other!
- www.intterragroup.com/crr-downloadable-resources/

CRR across the continuum

					
<p>A cart by itself: Little to no CRR. Activities are focused on suppression due to lack of funding, staffing, interest, &/or skills.</p>	<p>A cart before the horse: Some prevention activities take place but they are not aligned to a plan or supported by data.</p>	<p>A horse without a cart: A data-driven CRA outlines the risks the community is facing but the CRR plan has not yet been created.</p>	<p>A one-horse cart: The CRA is complete & drives some CRR planning but the work is driven by a very small group of fire department champions.</p>	<p>The SUV: The CRA is complete and drives fire-focused CRR planning. CRR is included in the daily work across the fire department. Evaluation is a consideration.</p>	<p>IDEAL CRR: The Fleet CRR is a way of life in the community. The CRA considers a wide scope of hazards including but not limited to fire. Priorities identified in the CRA are addressed in the CRR plan. Stakeholders, partners, and residents are engaged in the process. Evaluation occurs on a regular basis.</p>

SECTION 1/2

WHY BOTHER WITH CRR?

Very similar cultural and technological approach as USA until early 2000's

- Suppression Based-heavy investment
- Professional Judgment
- Limited Use of Data
- Silo Approach to activities
- Limited Approach to Partnership
- Performance Driven- Output vs Outcome?

- A strategic intent to “break the rules”
- Government catches up and mandates prevention
- The investment in information, knowledge systems and analysis
- A transformation of purpose, culture and structure

Trends and Patterns of U.S. Fire Loss, 2/16

8

NFPA Fire Analysis and Research, Quincy, MA.

- 60% reduction in fire incidents
- Lowest fire death and injuries for 50 years
- AFA's down by 50%
- Arson down by 60%
- Some reductions of more than 75%
- Engagement of front-line staff
- Focus extends to other risks

- ... all done against real term budget reductions averaging 35% over the period

“An Integrated Risk Management Plan must set out the Authority’s assessment of local risk to life and, in line with this analysis, how it is going to deploy its resources to tackle these risks and improve all sections of society ...The IRMP should be a strategic, forward-thinking document with the approach and detail of business and change management plans.”

How is this relevant to you?

The 3 Key Drivers for Successful CRR

Consider your CRR program- What are the drivers?

BREAK

LUNCH

SECTION 1/3

Getting the focus right

What does CRR mean to you?

“Community Risk Reduction (CRR) is a process to identify and prioritize local risks, followed by the integrated and strategic investment of resources (emergency response and prevention) to reduce their occurrence and impact”

Vision 20/20

“Early Initiative Frenzy”

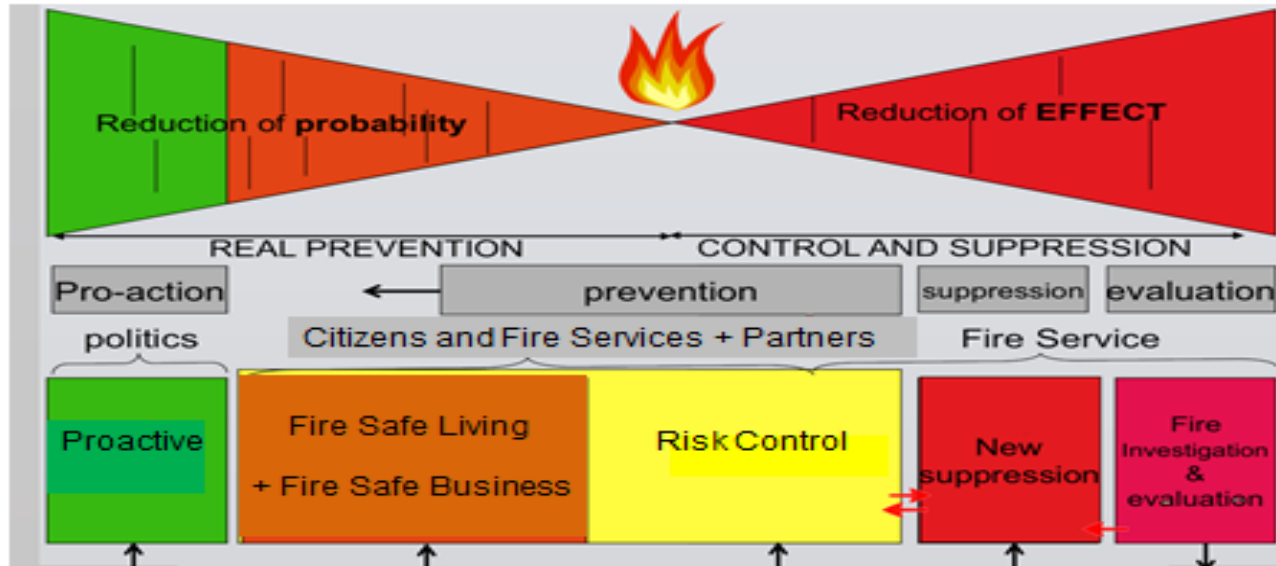

“And the winner of the ‘Really Out There’ Award is...”

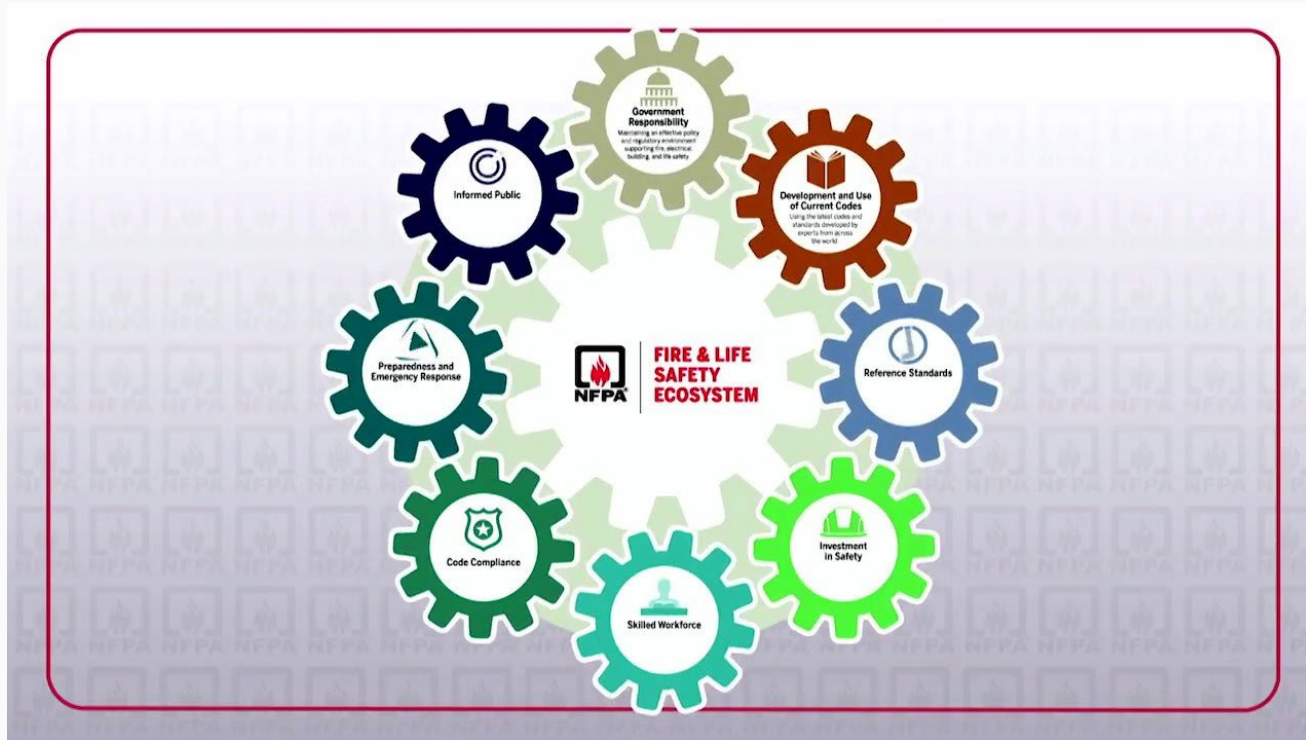

“Commencing with initiatives whilst worthy is the wrong starting point”

NEW DOCTRINE REQUIRED

“a means of capturing the risks found in your community in such a way as to help you identify priorities and actions to make your community safer”

Vision 20/20

National Strategies for Fire Loss Prevention

CRR Model Process

Identify the Risk

- Acquire data that identifies the risk
- Develop a Community Profile
- Identifying causal factors & vulnerable populations
- Identify Target Hazards

Prioritizing the Risk

- Likelihood
- Impact
- Scoring Target Hazards

Putting it all together

Overlaying risk with community information
Community Risk Priorities

What we know

SECTION 1/4

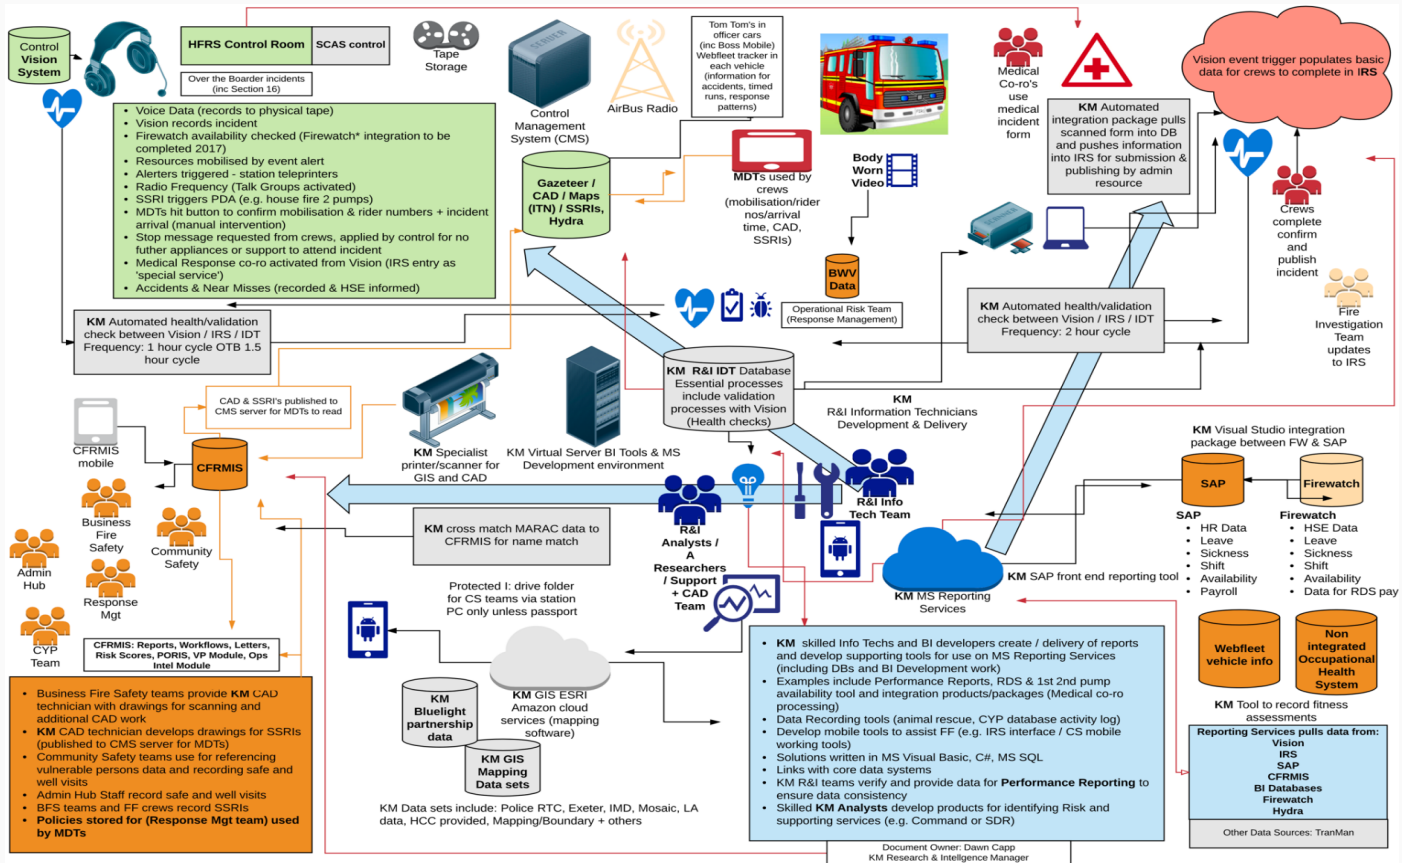

The Intelligent Organization

The 3 Key Drivers for Successful CRR

Data Holding Map

What types of departments do we typically see?

SOME QUESTIONS:

Which ones are the most successful?

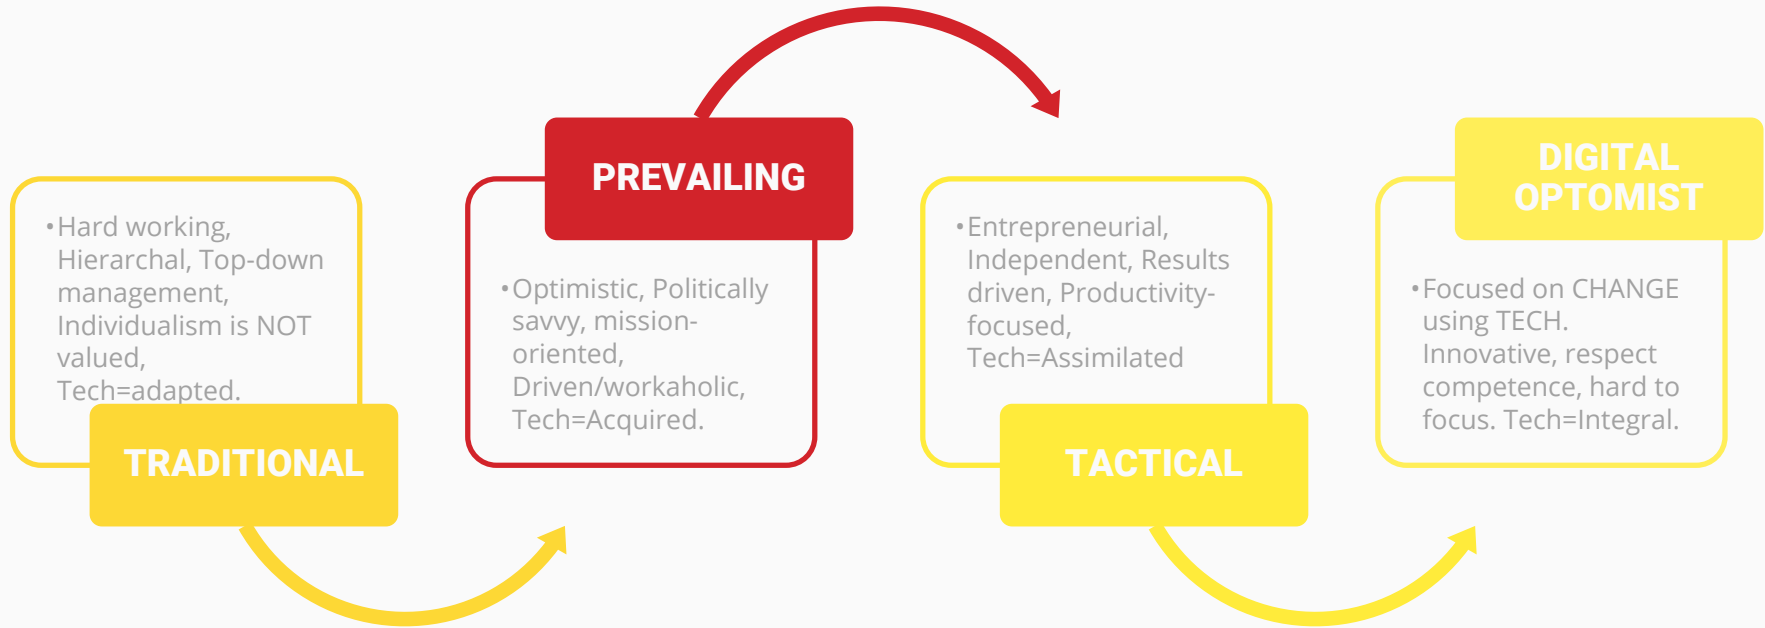

What makes them the best?

How do they view data & information?

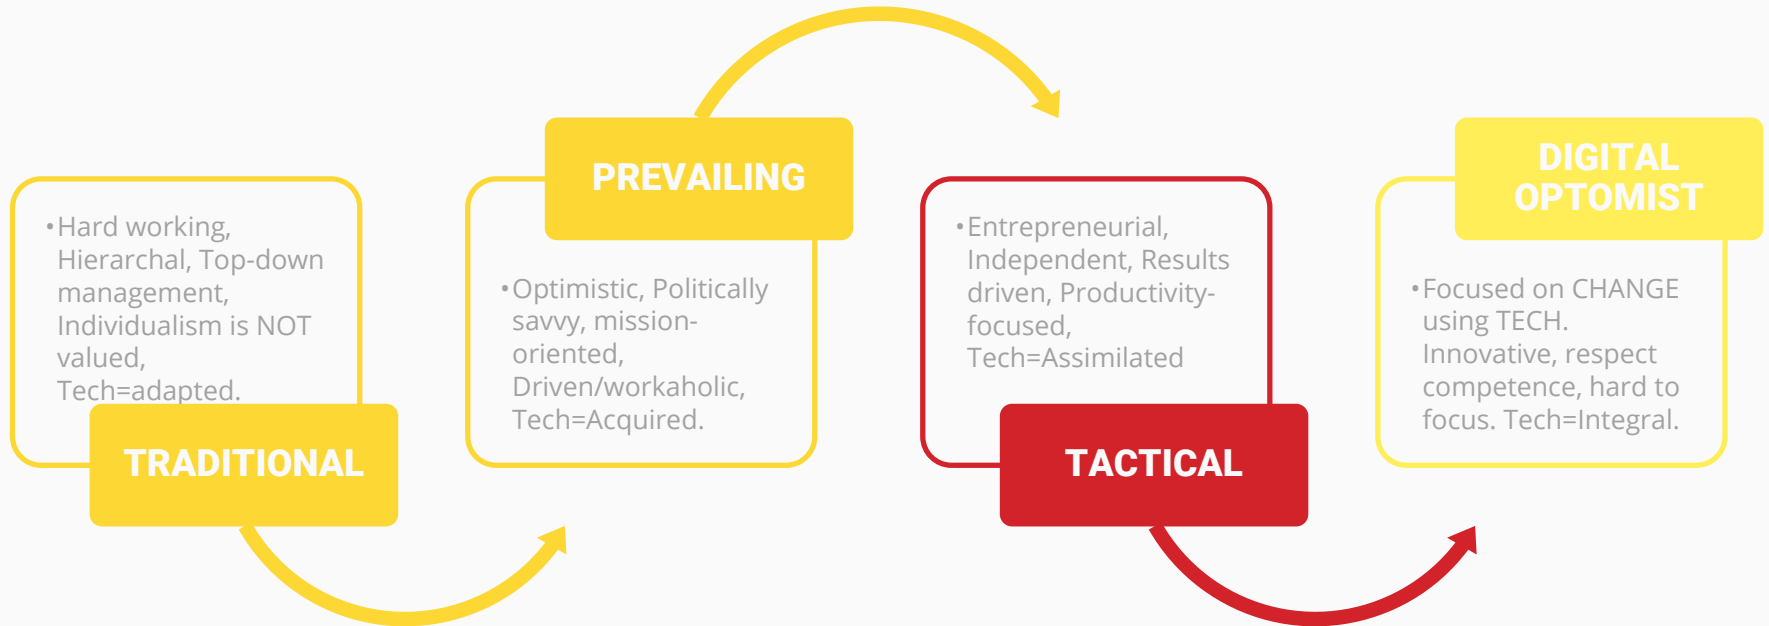

The Taxonomy of Fire Departments

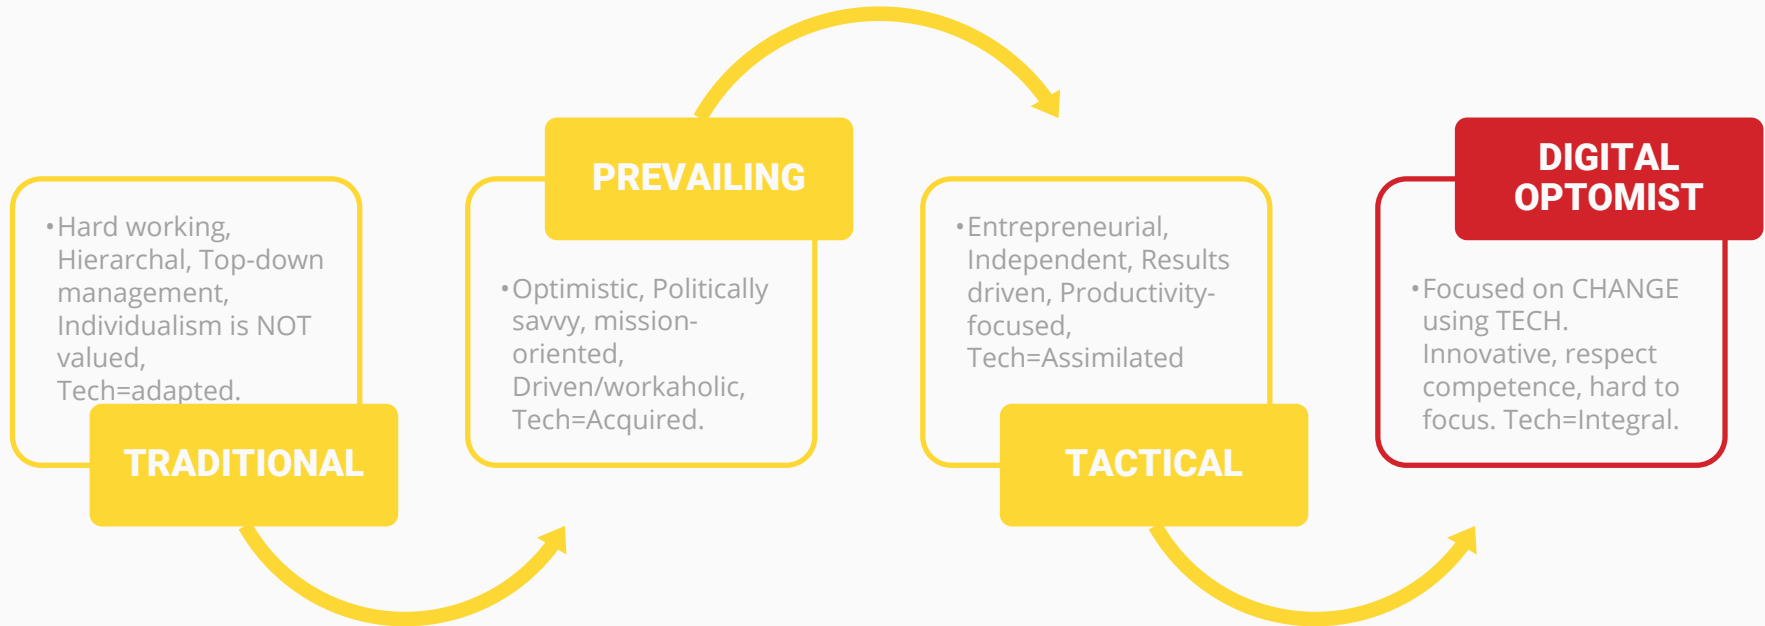

The Taxonomy of Fire Departments

The Taxonomy of Fire Departments

The Taxonomy of Fire Departments

- 4 keys to becoming a data organization.
 - What does it take to build analytics in a department?
 - Challenges you face.
 - What are some of the answers Fire Departments are seeking when they add analytics tools?
 - Red Flags to watch for.

ONE

You cannot have a Analytics program if you don't have a problem to solve.

What does it take to build analytics in your Department?

TWO

Quality of data is key – you cant get good answers to your questions if your data sucks.

THREE

Running an analytics program is different than any other function in a Fire Department.

FOUR

Find a partner to help integrate and de-conflict the data from CAD, RMS, and other systems.

What does it take to build analytics in your Department?

ONE

You cannot have a CRA program if you don't have a problem to solve.

TWO

Quality of data is key – you can't get good answers to your questions if your data sucks.

What are some of the answers Fire Departments are seeking when they add analytics tools?

Red Flags to watch for when building a CRA program

ONE

The executive team doesn't have a clear vision for how it will use CRA.

TWO

Not one has determined the value the initial use cases can deliver in year one.

THREE

There is no CRA strategy beyond a few use cases.

FOUR

Analytics roles – present and future - are poorly defined.

FIVE

The organization lacks CRA translators and/or cultural adoption.

Knowing what you know

What do you know?

- How do you collect, process and store that data?
- Who uses it?

STATION INCIDENT STATS

This data summarizes a station's incident volume by specific incident types based on the station ID that is passed with the RMS incident data. **Undefined** indicates that a 1st Due Station was not passed with the incident - if this category does not appear, there were no incidents with an undefined station.

The percent emergent is based on the value passed with the RMS incident data. The specific incident types are based on a final NFIRS disposition categories of **Fire/Explosion/OverPressure** (initial values 1,2) and **EMS/Rescue** (initial value 3)

Incidents by Day of Week

This chart is the total count of incidents by hour of day.

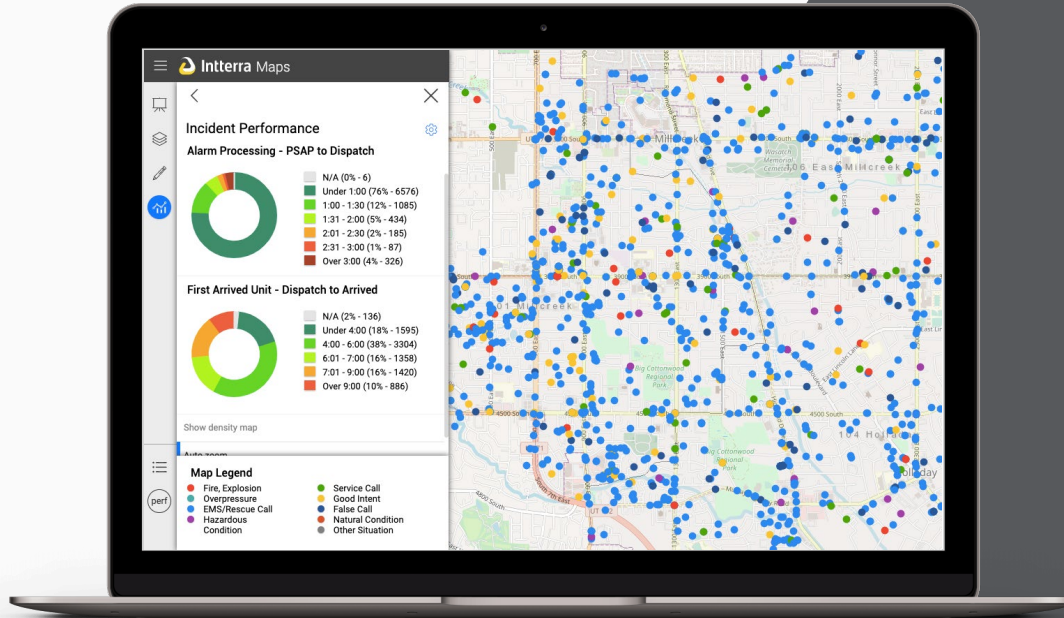

INCIDENTS BY TIME OF DAY

This chart is the total count of incidents by hour of day.

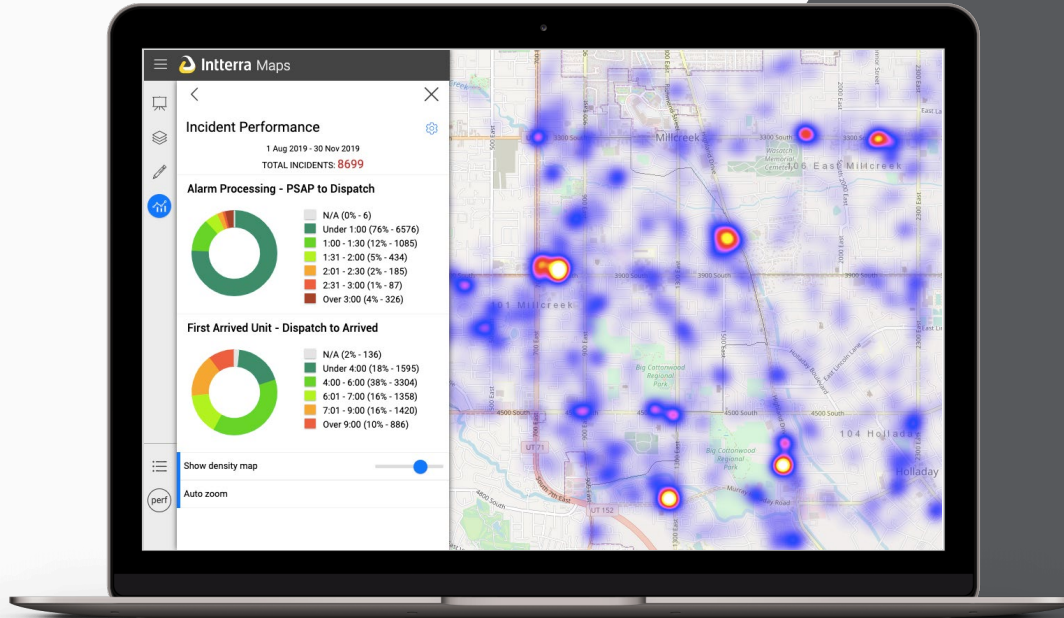

DOTS ON A MAP

Look, this is where
stuff happened.

DENSITY MAP

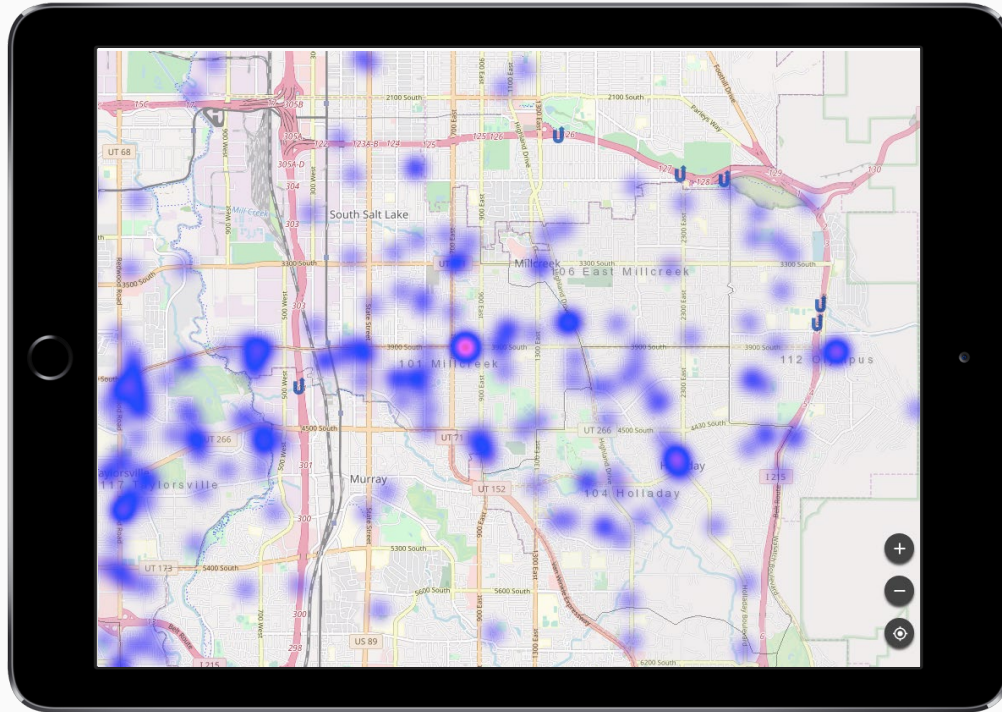

This is Naperville, you live in a different city. What else would you know about Naperville if you lived/worked there?

- 1. Cooking Fires:** These are cooking fires occurring in residential properties and have shown a steady rise over the last fire years (> 25%). They are characterized by individual/s being involved and have led to a rise in the number of injuries and represent an increasing proportion of deaths. Cooking fires are the single largest cause of residential fires in Naperville at 32% and 25% of fire related injuries, they account for 60% of recorded residential fire deaths.
- 2. Smoking:** This is the second most frequent cause of fire in the home and the second most likely cause of deaths and injuries.
- 3. Serious Road traffic collisions:** These show a seasonal variation but over the last 5 years the numbers annually remain fairly consistent. However in the most recent year there has been a spike in the summer months, prior to this the Fall tended to be the period of higher frequency.
- 4. Fire Alarm Calls:** Over the last fire years there has been a steady rise in AFD's while overall fires have been in decline. The frequency of these calls is creating a separate risk with the last 5 serious collisions of fire apparatus all occurred when they were responding to AFDs .This trend of apparatus accidents is growing relative to the rise of AFDs.
- 5. Minor Arson:** Naperville ranks high in the state for low level arson per capita and this has been climbing slowly in the last 5 years. Predominantly in deprived areas of the city these fires tend to involve cars, street furniture, dumpsters etc. They are the most frequent type of non residential fires.
- 6. EMS – Slips, trips, & Falls:** Of all acute calls slips, trips and falls is the most frequent category accounting for 21% of the total.

Cooking Fires Deaths & Injuries

DISTRIBUTION

There is a background increase in these fire types across the city which seem to be randomly placed but there are also specific neighborhoods which have clusters of these incident types. These concentrations are in deprived neighborhoods but the more widespread distribution is less obviously associated with deprivation.

TIMING

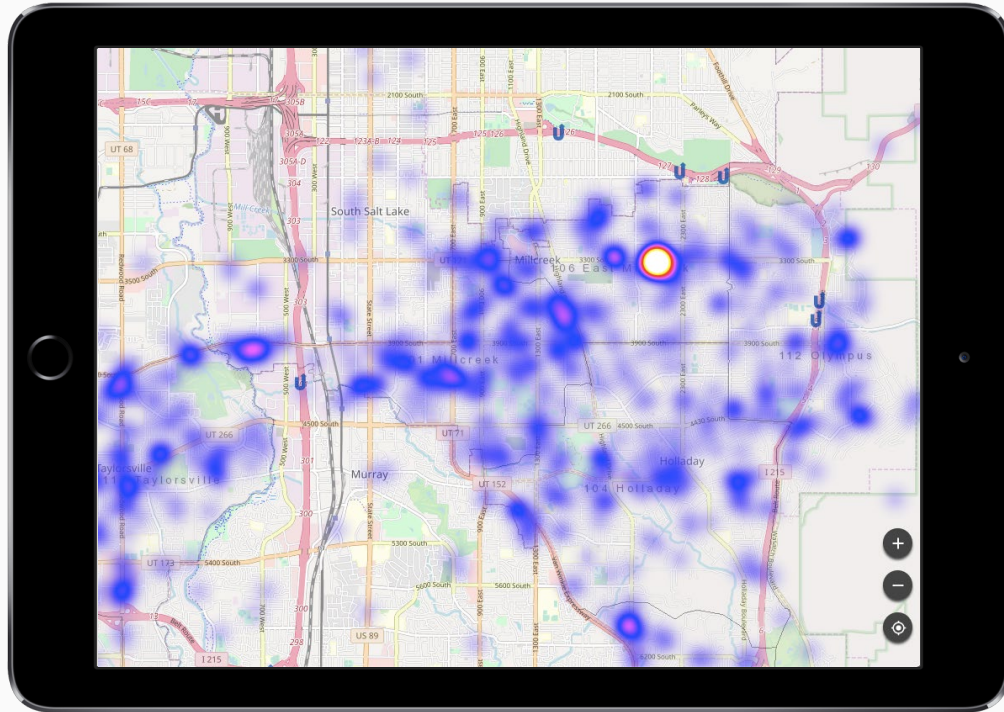

For those areas with high concentration the incidents tend to occur between 1300hrs-1800hrs. The more generalized distribution is less defined and occur across waking hours up to 2300 hrs.

Incident Metrics

TOTAL INCIDENTS: 713

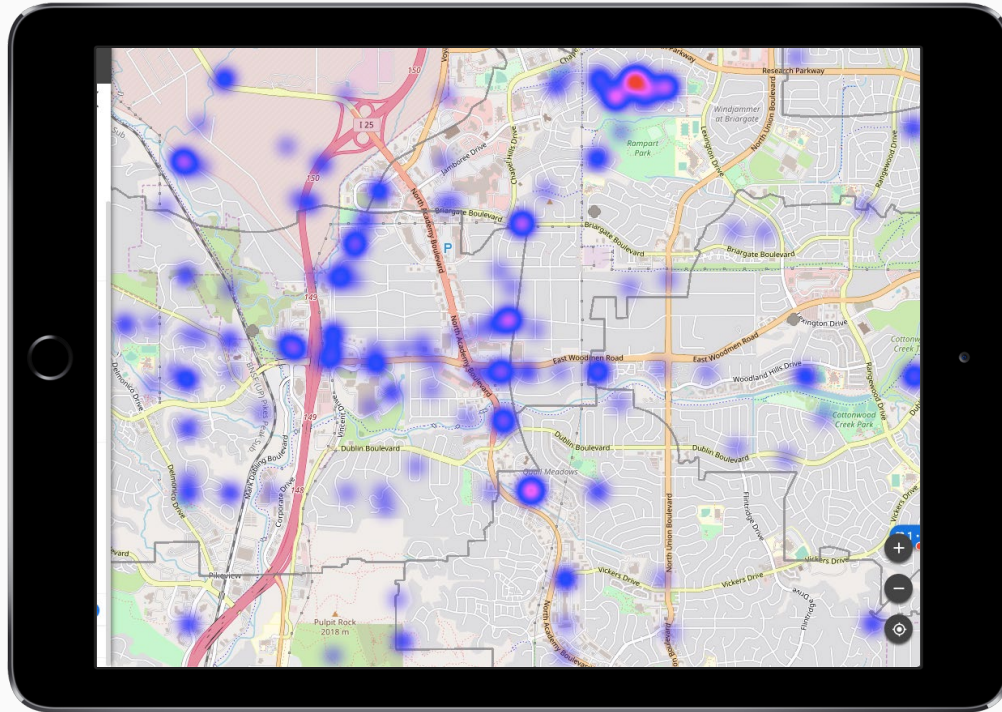

Incidents By Hour

DISTRIBUTION

Distribution tends to be fairly even across the city with a few areas of higher frequency – the distribution has some similarities with the heat map for risk #1.

DISTRIBUTION

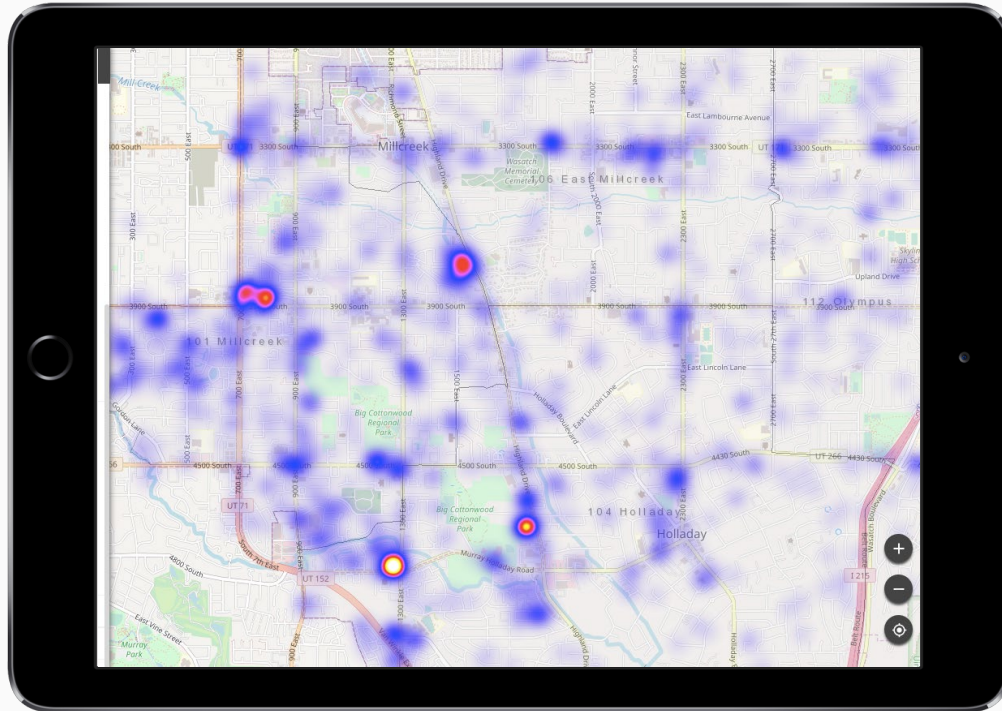

Distribution shows hotspots at the more complex highway intersections and certain points of fast minor roads with hidden dips and dangerous bends. There are some random occurrences as well. The recent spike however has a more defined distribution and seems confined to specific roads and areas.

TIMING

The regular occurrences at specific intersections and roads are caused by driver error/confusion caused by the road layout or hazardous nature of the roadway. The most recent spike however is a very different demographic 17-24 year old males and females (the former often reported as driver and the latter as passenger). Information reveals some of these cars are stolen whilst others are registered to the victim.

The areas of incident in these cases are localities where groups of young congregate, often more secluded parking lots. It is the roads to and from these points where the RTC's take place. The victims are not from this part of town but usually projects on the opposite side of the city.

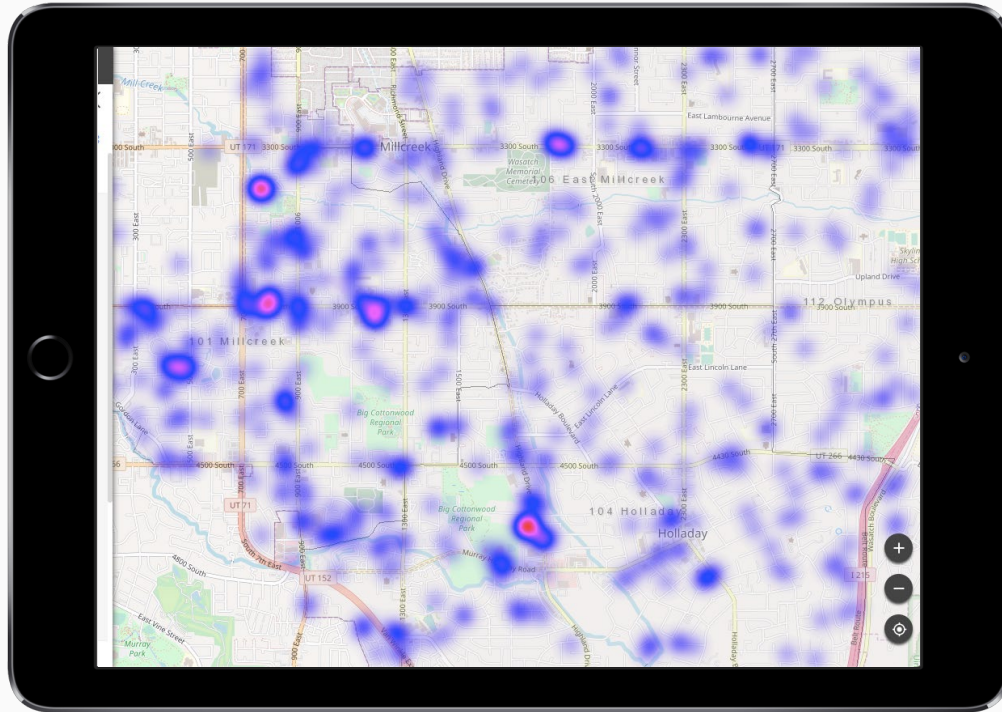

DISTRIBUTION

Distribution of AFDs is generally across those districts where building type requires alarms. Hence downtown areas, commercial and industrial zones, hospital and public buildings.

WHAT'S GOING ON?

While the heat map is helpful it fails to reveal a more specific fact. That some 20 named buildings account for some 30-32% all AFDs call. The top 20 offenders are two major hospitals, two poorly run homes for the elderly, a homeless shelter, two halls of residence for students/nurses, the remainder are business and commercial premises.

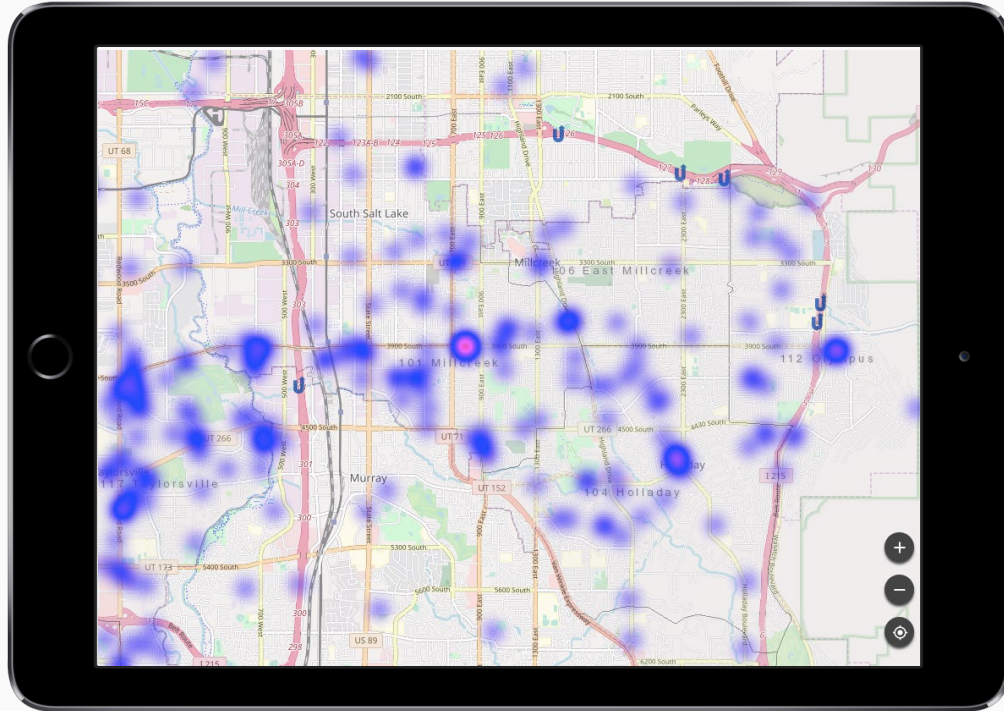

DISTRIBUTION

This is a persistent problem from the city and has been climbing slowly but inexorably over the last 5 years.

WHAT'S GOING ON?

Further research reveals that although the distribution predominates in deprived areas that are clustered around schools in poor neighborhoods. Furthermore evidence of time of these calls gives a further clue to the perpetrators. Frequency during time of day reveals that there is a strong correlation with school hours. With high frequencies occurring after school closes until 2100hrs.

EMS call type: % frequent caller %
run to hospital % of total
EMS calls

WHAT'S GOING ON?

Clearly the rise of calls correlates both to increases in this demographics group, low levels of health insurance. Public care services are operating with this group but their resources are limited. Hence wealthy neighborhoods are more likely to be a position to pay for private care services, stability aids and have health insurance.

Given what you know about Naperville, what other information would you like/need to know to understand about YOUR activities to deal with these risks even better.

SECTION 2/4

Intterra's golden rules for positive relationship

- 1 LEADERS INTENT**
Executives need to develop a clear vision for how the organization will focus on CRA.
- 2 IDENTIFY AND FOCUS ON SPECIFIC PROBLEMS**
The data can show you what the problems are, and information can help the organization focus on solving them (and measuring them)
- 3 CRA CANNOT BE A HOBBY**
An organization should focus on driving down risk. That is not an undertaking for one or two people in an organization.
- 4 IF IT'S ABOUT USING DATA, WHAT'S YOUR PLAN?**
Data needs to be available for analysis, and building a program means identifying data both internally and externally and actually designing to use it.

Thinking about Naperville what would perfect look like?

Where does it sit on the scale 1-10?

X + 1
